

Adomus theme documentation

If you have any questions that are beyond the scope of this documentation, please feel free to email us via the contact page [here](#).

Getting started

Here are the steps you should follow before you begin to edit the content of your site:

1. Installing [the theme](#)
2. Unlock Adomus menus by [validating your Adomus licence](#)
3. Install [HBook and HTestimonials plugin](#) which are bundled to Adomus (standalone plugins).
4. Unlock HBook menus by [validating your HBook licence](#)
5. [Load the demo content](#) if you wish to start editing from there

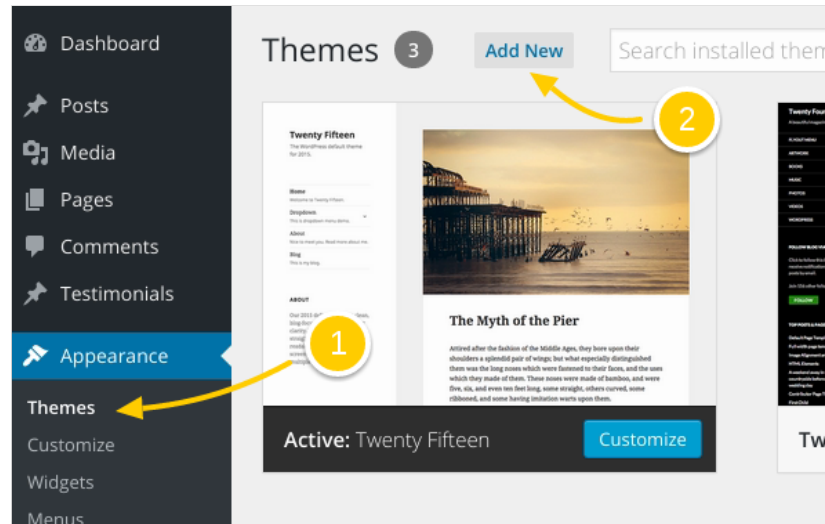

If you wish to do some customization on Adomus, we recommend to [create a child theme](#) so your customization won't be erase when you'll [update the theme](#).

Theme installation

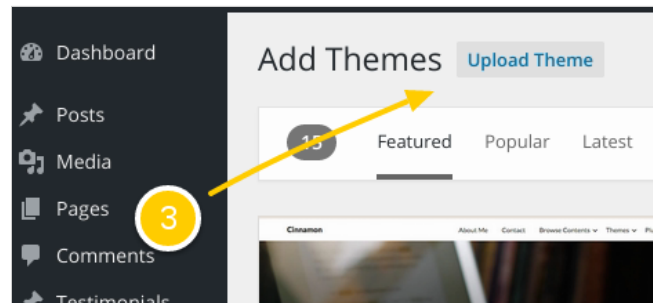

1. When you download Adomus theme, you get a **zip file** of the theme and it is simply this zip file that you will upload to install the theme.
 2. There are 2 ways to install a WordPress theme:
 - [using the WordPress installer](#)
 - [uploading the theme via FTP](#)
-

Using the WordPress installer

1. Go to **Appearance > Themes**
2. Click **Add new**

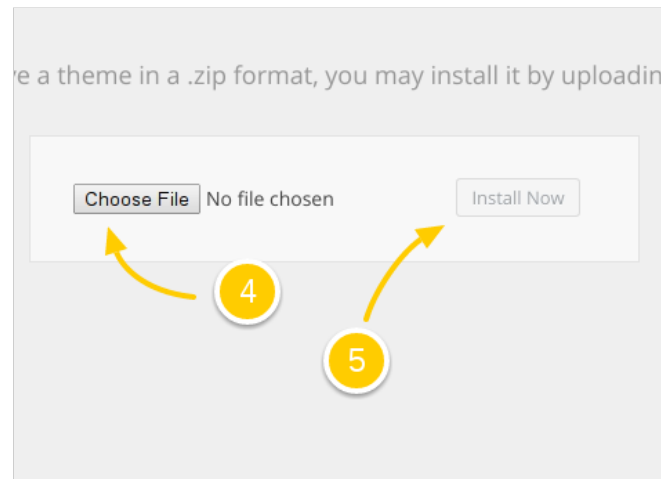

3. Click **Upload theme**

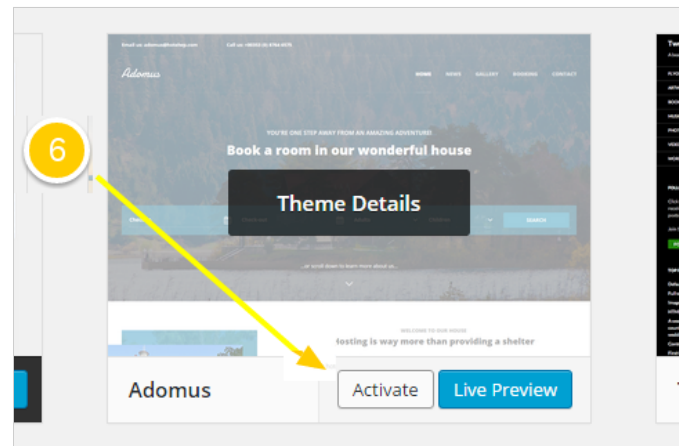

4. Click **Choose file** and select the **adomus.zip** file you downloaded

5. Click **Install now**

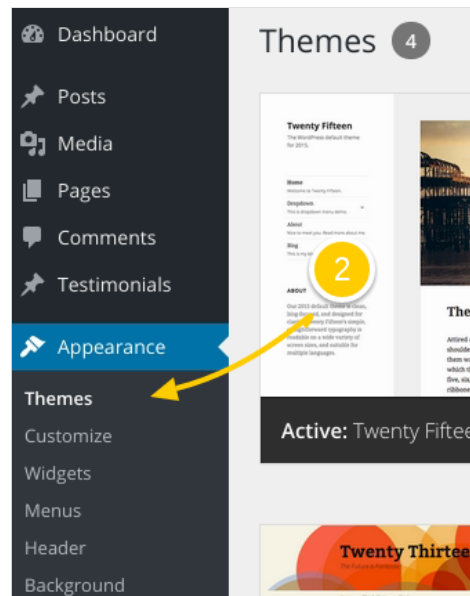

6. Once the theme has been installed click **Activate Theme**

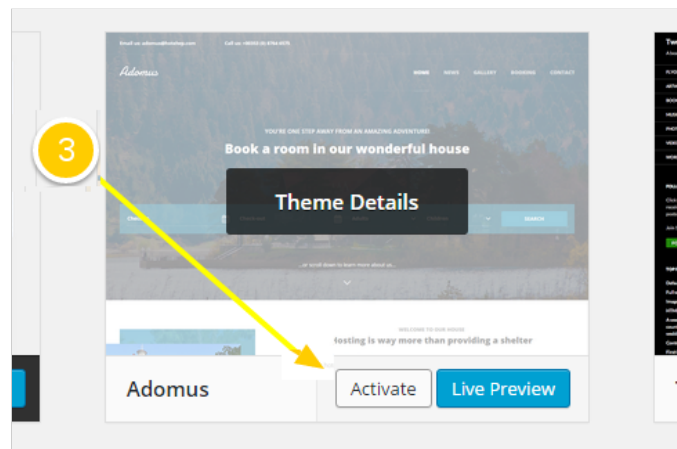

Uploading the theme via FTP

1. Upload the **adomus.zip** file into the **wp-content/themes/** folder on your server
2. Extract the **adomus.zip** file
3. Once the theme is uploaded log into WordPress and go to **Appearance > Themes**

4. Find the **Adomus theme** and click **Activate**

Child theme

- **Use of child theme**

If you don't plan to make any CSS/HTML/PHP customizations, you don't need to create a child theme.

If you want to customize Adomus theme, you should create a child theme. So you can modify the child theme without editing the files of the parent theme itself. That

way, when the parent theme is updated, your modifications are preserved.

For this reason, child themes are the recommended way of making modifications to a theme.

See Wordpress codex for [more information regarding child theme](#).

- **Creating a child**

You can download Adomus child theme from our website [here](#). You just have to install the **adomus-child.zip** file as if it was a theme (use the WordPress auto-installer or a FTP software).

Now, to customize the theme, just edit the child theme and when you upgrade the theme, just overwrite the parent theme and there's no messy "recreating my customizations" process.

Theme updates

In order to add new functionalities, to stay up to date with the WordPress software evolution, to correct bugs, Adomus theme is regularly updated.

Updating does not affect the content of your site. Your posts, settings, plugins, themes, or your media files... will stay the same. Don't worry!

Notifications of an update release

- If you purchased Adomus on our website, you will receive an email each time an update is available.
- You can also check if there is a new update directly on [Adomus changelog](#) page.

Update your theme

If you want to update your theme, follow these instructions:

1. **Download** the theme again from [our downloads page](#) :

2. **Backup** your website!

This is not compulsory but periodically backing up your entire installation (entire directory structure + database) is a good idea, especially before making any type of update to themes, plugins, core files, etc. Learn more about backups [here](#).

3. **Upload** the updated theme

- Rename the existing **adomus/** folder which is in the **wp-content/themes/** folder in something like **adomus_before_update_to_version_2** (so the previous version is saved in case something goes wrong).
- Simply follow the standard [FTP Installation instructions](#) - upload the new theme to the **wp-content/themes/** folder.

Theme licence validation

Theme licence validation

You received a **Purchase code** in the purchase confirmation email sent from sales@maestrel.com. If you can't find it, feel free to email us via the contact page [here](#).

In **Appearance > Adomus - Licence**, you will enter your Purchase code to validate your licence.

Licence

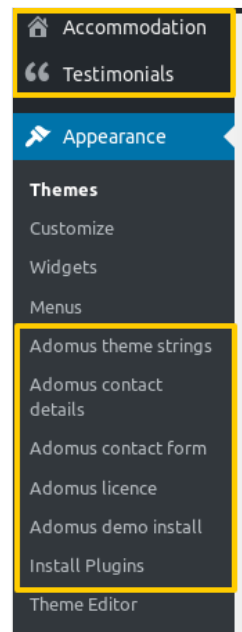

[Where can I find my purchase code?](#)

Activate your licence

Enter your purchase code

Verify purchase code

When your licence is validated, you will see that all Adomus menus are unlocked:

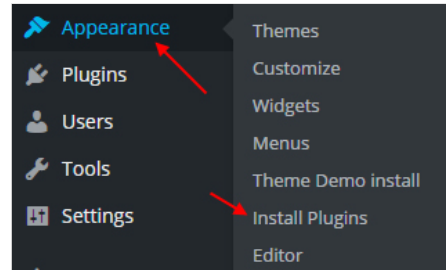

Bundled plugins installation

Adomus theme comes with two plugins developed by us:

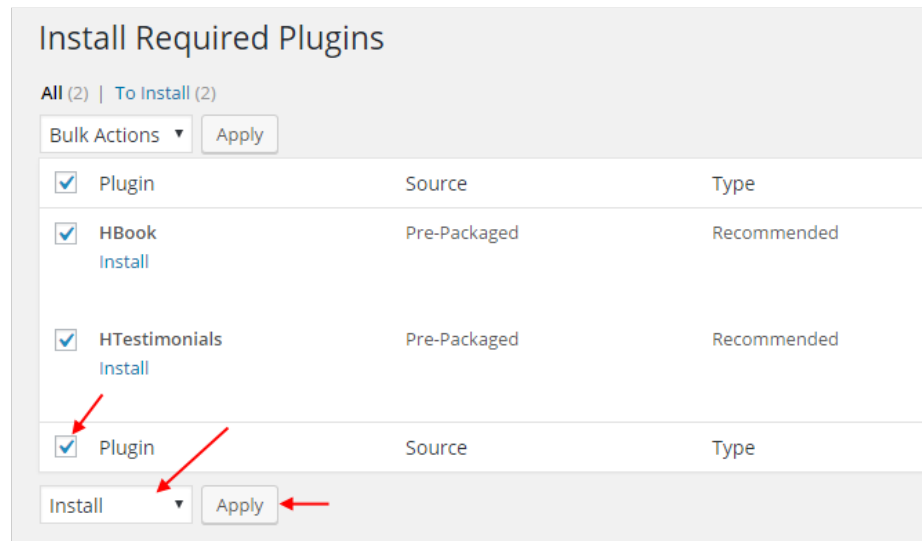

- [HTestimonials](#)
- [HBook](#)

These bundled plugins are pre-packed with Adomus theme therefore their installation and activation are easy and quick. Follow the steps below:

1. Select **Appearance > Install Plugins**

2. Select both plugins, select **Install** in Bulk Actions, and click **Apply**

3. Wait until the plugin are installed and activated.

HBook licence validation

You will use your **Purchase code** to unlock as well HBook menus. You can find this purchase code in the purchase confirmation email sent from sales@maestrel.com. If you can't find it, feel free to email us via the contact page [here](#).

In **HBook > Licence**, you will enter your Purchase code to validate your licence.

Licence

[Where can I find my purchase code?](#)

Activate your HBook licence

Enter your purchase code

Verify purchase code

When your licence is validated, you will see that all HBook menus are unlocked:

Help

If you have any troubles validating your HBook licence, please refer to [this article of our knowledgebase..](#)

Demo Content Installation

You might find it handy to use the [Demo](#) site as a starting point to create your site. We have made it easy!

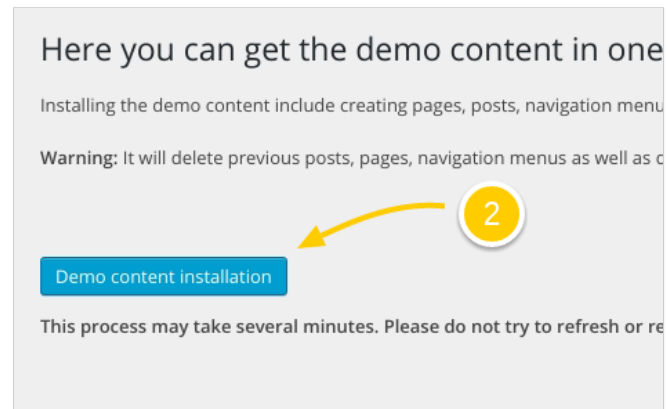

Note that loading the demo content will delete any previous posts or pages with their meta, sidebar settings, menus.

Note that this process might take several minutes. Be patient! When the demo installation is finished, a banner will appear with a message to inform you that the demo content installation is done.

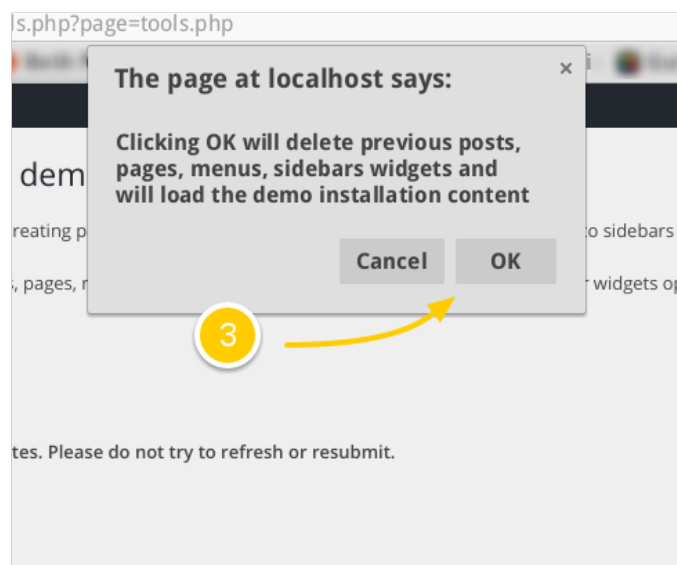

In **Appearance > Adomus demo install**, you will find our demo installer tool.

To load the content and options of the Demo, follow the instructions below:

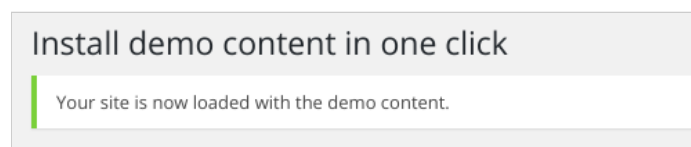

1. Click on **Demo content installation**

2. A pop-up window will open, asking you to confirm. Click **OK** to confirm.

3. The installation can take several minutes. When it is done, a message will appear.

Booking system

The booking system that is included in Lavilla theme is our own booking system plugin, [HBook](#).

You can find the documentation for HBook plugin [here](#).

Sections and templates

This section of the documentation presents the different **page templates** and gives details about **Adomus sections**, which is great tool for you to build a variety of pages with simplicity.

Adomus offers 2 page templates:

- **Default template:** this is a full width one centered column template. With this template, you can use [Adomus sections](#) and you can as well include a [booking form](#)

within the hero.

- **Page with sidebar:** this is a page with a sidebar on the right

Adomus theme comes with a **a choice of sections** that will allow you to build your pages easily by choosing and arranging different sections. It is a great tool for you to build a variety of pages with simplicity. Each sections comes with its own settings and they are described below.

If you wish to use Adomus sections in a page, simply set it in **Page sections**:

1. Set that you wish to use **Adomus sections** for this page
2. You can select which sections you wish to add
3. Here you can expand or collapse the section settings

Page sections ^ v ▴

5. Add an **image**

Gallery

This section allows you to display a gallery of images with an introduction text.

The screenshot shows a 'Gallery' configuration panel. At the top, it has a title 'Gallery' and a close icon. Below the title are two links: 'Delete section' and 'Close section'. The main configuration area includes: a 'Section tagline' text input field (callout 1); a 'Section title' text input field (callout 2); a 'Layout' dropdown menu currently set to 'Description left' (callout 3); a 'Description' text area (callout 4); an 'Images' section with a 'Select images' link (callout 5); a 'Link text' text input field (callout 6); and an 'ID of the gallery page' text input field (callout 7). At the bottom, there are again two links: 'Delete section' and 'Close section'.

1. Add a **tagline** for the section

2. Add a **title** for the section

3. Select the **layout**: if you do not wish to include a text, select "Description center".

4. Enter a **description** here

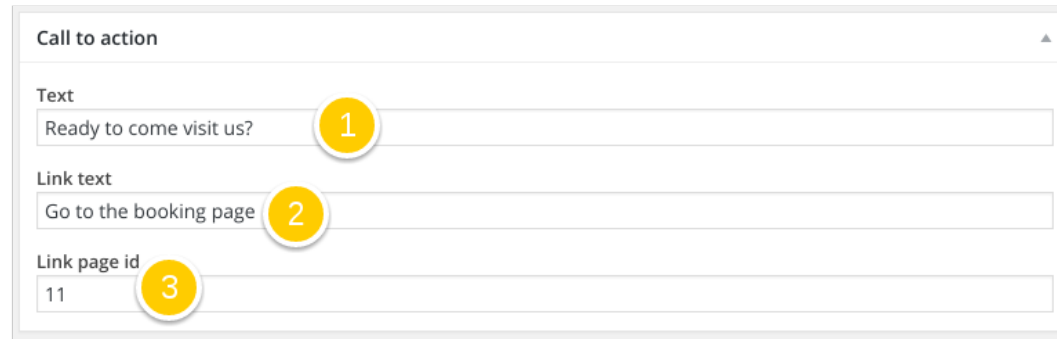

5. Select the **images** for the gallery section

6. Enter the text that will be displayed as a link to your gallery page (optional)

7. Enter here the **id** of the gallery page to link to (optional)

Call to action

This section allows you to display a **call to action**.

The screenshot shows a configuration form titled 'Call to action'. It contains three input fields, each with a yellow circular callout containing a number:

- Text:** The first field contains the text 'Ready to come visit us?' and is marked with a yellow circle containing the number 1.
- Link text:** The second field contains the text 'Go to the booking page' and is marked with a yellow circle containing the number 2.
- Link page id:** The third field contains the number '11' and is marked with a yellow circle containing the number 3.

1. Enter the **text** to be displayed

2. Enter the **text** for the link

3. Indicate the **id of the page** to link to.

Contact / Map

In order to display maps on your website, you need to :

1. get a Google API key. Please refer to this page: [Get API Key](#)

2. enter the Google API key in **Appearance > Customize > Map**. Please check [this section](#) of Adomus documentation.

This section is a one or two-columns section that can display a **contact form, a map or/and contact information**. The layout options are:

- contact form and a map
- contact information and map
- contact information and contact form
- a contact form only
- a full-width map

Multi-language

In order to create a multi-language website you will need to use a multi-language plugin. There are several multi-language plugins available. Adomus theme is compatible with [WPML](#) and [Polylang](#)

with [WPML](#) and [Polylang](#).

Translate Accommodation pages with WPML

Once you have activated and configured WPML plugin you need to make the "Accommodation Custom posts" translatable.

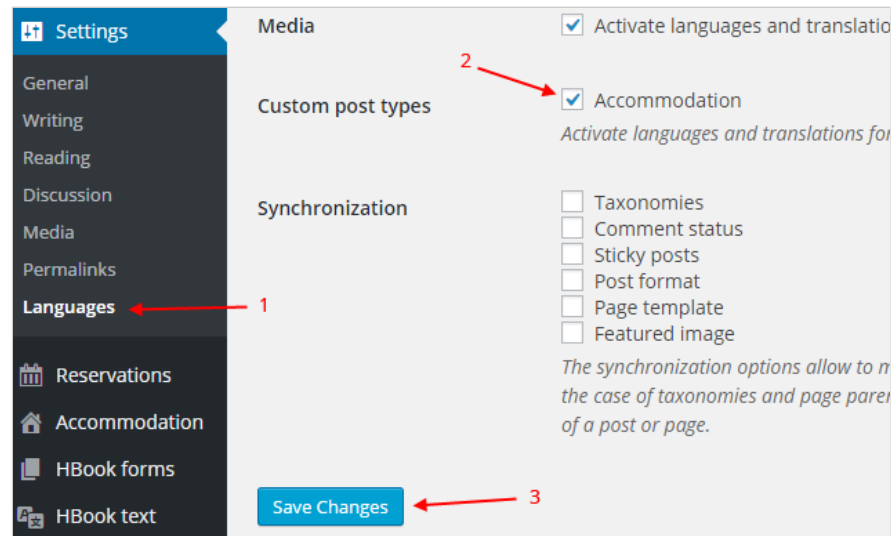

1. Click **Translation options**
2. Select **Translate**
3. Click **Save**

You can now translate the Accommodation pages. Note that you don't have to enter the Accommodation settings in the translated page again (except the Description fields).

Translate Accommodation pages with Polylang

Once you have activated Polylang plugin you need to make the "Accommodation" translatable.

4. Click **Save changes** to save the Polylang settings.

1. Click **Languages** to access the Polylang setting page
2. Check the **Accommodation** box
3. Click **Save Changes**

You can now translate the Accommodation pages. Note that you don't have to enter the Accommodation settings in the translated page again (except the Description fields).

For the translation of the text displayed during the booking process, refer to this section of HBook documentation: [Text customization and translation](#).

Theme translation

Adomus theme follows the standards of WordPress internationalization. Below are instructions on how to translate Adomus theme with Poedit.

Note: these instructions would be the same for any other internationalized theme. You can learn more about translation and WordPress here: http://codex.wordpress.org/Translating_WordPress.

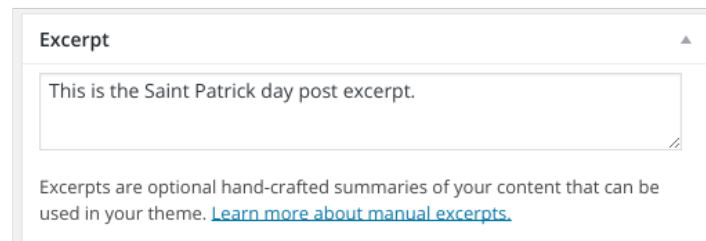

1. Download and install **Poedit**
2. Open the **adomus/languages/default.pot** file in Poedit
3. Create your .po and .mo files by going to File -> Save as...: choose the **wp-content/themes/adomus/languages/** folder and add the correct locale to name the file name (for example for a French translation: **fr_FR.po**)
4. Translate the strings you will use on your website
5. Save again to update the .po and .mo files

FAQ

- [Where is the Post excerpt?](#)

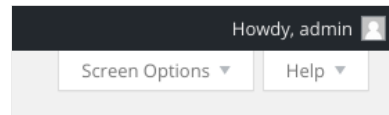

Where is the Post excerpt?

- The excerpt is located below the Post Options.

-
- If you don't see it you have to make it appear via the **Screen Options**:

1. Click on **Screen Options**

2. Tick the **Excerpt** box
